Quick-Trak Inventory Pro

Inventory Management Software

American Microsystems, Ltd.

Powerful inventory management solution for companies on the move.

Quick-Trak Inventory Pro is an advanced inventory management solution for mid-sized businesses with high-volume, multi-site/multi-user requirements. Intuitive and easy to use, Quick-Trak Inventory Pro comes with everything you need to track your inventory accurately. Quick-Trak Inventory Pro will track each activity from receiving through shipping and everything in between. Quick-Trak Inventory Pro delivers a powerful yet flexible inventory management solution that can greatly increase productivity in your warehouse and manufacturing operations.

Quick-Trak Inventory Pro provides support for sales order entry, purchase order entry, receiving, put-away, picking, shipping, physical inventory and cycle counting capabilities. All these functions are available at both the PC workstation level and at the wireless handheld level. When used in conjunction with AML M7100 wireless (RF) data collection terminals, Quick-Trak Inventory Pro enables real-time receiving, put-aways/moves, picking, shipping, and inventory cycle counts. M7100 users can capture critical inventory data – at the right moment, in the right place, in real-time.

Inventory Management Software

Receiving

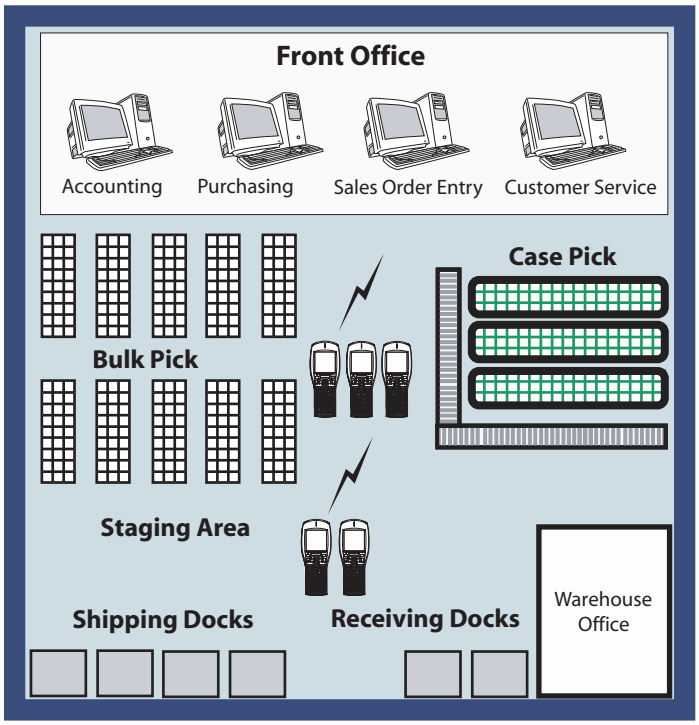
Quick-Trak Inventory Pro simplifies the receiving process through the use of data capture technology. It supports receiving purchase orders, returns, and unexpected receipts. These transactions can be performed at both the PC workstation level and/or with the AML M7100 wireless portable data collection terminal.

Put-Away

Quick-Trak Inventory Pro simplifies the put-away process by providing warehouse personnel with real-time visibility to the location of products within the warehouse. The ability to quickly determine the best location for inbound inventory is a key factor in improving the productivity and efficiency of your warehouse operations.

Cycle Counting

Cycle counting is an effective tool in identifying inventory discrepancies. **Quick-Trak Inventory Pro** provides scheduled as well as random cycle counting functionality. This process can be accomplished in real-time and the inventory reconciled very quickly.



Import/Export

The Import/Export Module within **Quick-Trak Inventory Pro** is the keystone between your accounting/ERP system and warehouse operations. On the Import, this module features the capability to import purchase orders, sales orders, item master files, customer databases, and vendor information. On the Export, this module can be used to complete daily warehouse operations such as PO receipts, inventory adjustments, sales order picking and sales order shipping.

Picking

The picking function within **Quick-Trak Inventory Pro** plays a key factor in contributing to significant increases in warehouse productivity and inventory accuracy. When coupled with the AML M7100 wireless portable data collection terminal, the picking module provides real-time feedback and validation.

Shipping

The *Shipping* or *Ship Confirm* function within **Quick-Trak Inventory Pro** provides a final check-and-balance for all picking transactions performed in the warehouse.

Reports

Quick-Trak Inventory Pro provides many standard report formats for use in everyday business. Using these standard report formats and our on-the-fly querying capability, you can easily generate various reports. Here are some common examples:

- Min/Max Re-Order Levels
- On-Hand Inventory (by Item, Location, Category)
- Receiving Report (Date Range)
- Shipping Report (Date Range)
- Cycle Count Inventory
- Open Purchase Order Report
- Open Sales Order Report
- Backorder Report

Stock Replenishment

Quick-Trak Inventory Pro provides a series of inventory management reports that allow you to monitor and maintain your inventory at the optimal levels. When used in conjunction with our standard reports, the AML M7100 wireless terminal provides quick and easy stock replenishment capabilities.
